

School of Public Health and Community Medicine

Master of Public Health in Primary Health Care

About this degree

The Master of Public Health in Primary Health Care specialisation is offered by the School of Public Health and Community Medicine in collaboration with the Centre for Primary Health Care and Equity (CPHCE). This specialisation equips students to work as clinicians and managers and to contribute and respond to current developments in primary health care services in Australia and internationally.

Program structure

Primary health care is recognised as a critical component of any health service, with the potential to improve the efficiency and effectiveness of the whole health system. The 'Principles and Practice of Primary Health Care' course provides an introduction to the principles of primary health care and their application in the delivery of health care in the community.

A number of services are specifically analysed including general practice, community health services, rural health services and Indigenous health services as well as the integration between primary health care and specialised and hospital care. Other courses in the stream explore a range of skills, fields and clinical issues relevant to primary health care including community development as an approach to improving the health of individuals and the broader community, project/program management and evaluation, and HIV, alcohol and other drugs, smoking and Indigenous health.

The project comprises an in-depth study of a contemporary public health issue or topic relevant to primary health care. This can be undertaken in association with the Centre for Primary Health Care (see www.cphce.unsw.edu.au).

Who should do this degree?

The Master of Public Health in Primary Health Care stream is suitable for all those with an interest in primary health care including primary health care professionals, managers, project officers, planners and policy makers.

Mode of delivery

This program can be taken either full-time or part-time. Courses are offered internally on campus with face-to-face teaching, or externally by distance mode.

Learning from a team of highly experienced course convenors as well as from discussions with classmates who are actually working in the Australian primary healthcare system were the best parts of the course. It provided me an opportunity to have a refined insight into the healthcare system of Australia
